

High-Performance Management Forum Amsterdam 2008

Performance Analysis Report Jumping Events

Project Leader:
Dr. Wolfgang Ritzdorf
German Sport University Cologne, Germany

General Comments

The following tables and figures present the findings of the performance analysis in the jumping events.

For a better understanding please use the following list of abbreviations and comments.

WTL / ETL (World Top List, European Top List)

Positions 1, 3, 8, 20
Number of countries in Top 20
Number of Europeans in Top 20
Mean age of Top 20 performers in the world
Mean age of the Europeans in Top 20

Note: Each country is counted only once. Therefore the number of Europeans may be higher than the number of countries (e.g.: there are 5 Russians in the Top 20 of the high jump. This counts as one country, but five Europeans).

OG / WC / EC (Olympic Games, World Championships, European Championships)

Positions 1, 3, 8 and the result necessary to make the final (N=12)
Number of Europeans in the final (N=12)
Number of European medallists
Number of SB / PB / NR / AR or WR done in the final (N=12)
Number of athletes who took part in the previous major event

Juniors

The tables for the juniors follow the same structure.

Individual performance trends 2008

The eight athletes are selected as follows: Olympic medallists + 5 best competitors according to WTL. The table shows competitions in 2008 and as a summary the number of competitions, the number of competitions equal/better than the qualification height/distance to make the final in the Olympics, the SB and whether the athlete made the Olympic final.

ND = No data found
